

TOP DOCS

+ caring champions

They listen patiently while you list all the diagnoses you Googled, cuddle you when you're cranky and ill, and come to your aid when you're in need of serious healing — in short, healthcare workers are the closest thing to miracle workers we have in modern times. And when it comes to working miracles, Toledo's Top Docs (and the Caring Champions who support the cause) have got us covered. Meet the health experts keeping all of us in top shape, inside and out.

Laser hair therapy is a breakthrough technology. Professor Andre Mester from Budapest, Hungary discovered hair growing around wounds he was treating with laser light in 1964. Since then lasers are widely becoming one of the most popular non-invasive hair loss treatments.

It's an amazing treatment for thinning hair in both men and women. And the beauty is it's painless, and 100 percent FDA compliant for safety.

I use one of the most scientifically advanced cosmetic lasers available. It looks like the drying hood you sit under at the salon, but instead of blowing air it completely bathes the scalp and hair in therapeutic light.

I love seeing people's happiness with the results. Their relief and satisfaction is one of the best parts of my job.

Jan treats thinning hair with specialized lasers at Jan's Laser Hair Therapy.
